Partner

UNIORG Group
<http://www.uniorg.de/en/>

With SAP Business One we had the chance to involve smaller subsidiaries into the VEKA worldwide processes and intercompany world. This is very important to standardize processes and to step into integrated processes also in starting companies of the group. And we have a common way to develop companies on a common IT standard from SAP Business One to ERP or S4/HANA.

Objectives

- One of our main benefits will be the harmonization and standardization of master data and processes for all of our companies in the world
- Even small companies of our group should participate of VEKA established processes, although they are too small to use SAP ERP or S4/HANA

Why SAP and Partner

- We are using SAP (R2, R3, ERP) since 1989 and are highly convinced of SAP solutions because of functionality and integration.
- Fast implementation and low costs.
- Integration capabilities and country solutions.
- SAP Business One is used in Chile, India, Thailand, Malaysia, China and in future in Brazil.

Benefits

- Easy to use.
- Short implementation phase & short training phase.
- Specific workflows.
- Well-established intercompany processes.
- Perfect reports.

Scalability

Application that can grow with the company

Efficiency

Integrated processes. No double postings in material management and financials. More work output

Faster

Intercompany processes (order, billing). Less errors.

“We are so glad to use SAP Business One in Chile. Our employees are working with an integrated ERP system for the first time and we see positive results right from the start. Easy implementation, innovative screens to use SAP Business One and an intuitive overview of our business figures. That’s why we will keep on with UNIORG and an SAP Business One implementation in Brazil next year.”

Patrick Tovar, Manager SAP FI Applications - VEKA AG
